

To whom it may concern

**Statement: Use of Wavin AS+ and SiTech+ in all types of buildings**

Wavin AS+ and Wavin SiTech+ are high-performance wastewater pipe systems for domestic drainage. Both systems are suitable for use in all types of buildings, including single-family homes, multi-family residences, high-rise buildings, hospitals and hotels.

Contrary to some interpretations, SiTech+ is not limited to buildings with fewer than three floors. When installed according to the Wavin Technical Manual and EN12056 standards, both AS+ and SiTech+ can be used equivalently, regardless of building size. The acoustic recommendations found in the Sound Brochure are based on German DIN 4109 standards and serve as guidance for acoustic planning, not as limitations on system use.

Final system selection should be based on project-specific acoustic requirements and construction methods, as assessed by the planning engineer or technical expert.
