## Making the sustainable, attainable

Sustainable thinking is good. Sustainable action is better. Better for the communities that we live in. Better for the planet that we share.

As a market leading contributor to the built environment, our sights are firmly set on leading our industry in sustainability by 2025. We're backing this ambition with real investment, real action, real outcomes and real leadership. Ultimately, our goal is to achieve Net Zero Carbon emissions by 2050.

Working with our customers, users and suppliers, we'll design out carbon from every product and process that we're responsible for. Our focus throughout will be to build healthier, more sustainable environments for all.

Our sustainability journey is well and truly underway at Wavin.

Let's work together to help build a better future for generations to come.

# Our purpose

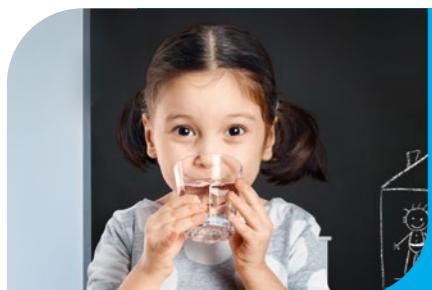

## Building healthy, sustainable environments

There are four pillars driving our sustainability journey, selected to reflect where we can contribute to the United Nations published Sustainable Development Goals. These pillars form the foundation of our purpose: to build healthy, sustainable environments.

While we build and create value through our products and services, we do so in a mindful way – by using as much recycled material as possible, reducing energy consumption and waste, and keeping a close eye on our footprint. In other words, doing our utmost to create a sustainable future.

1 | 2 | 3 | 4

The four pillars form the foundation of our purpose:  
to build healthy, sustainable environments

### Safe and efficient water supply

Future generations face a 40% shortfall between water supply and demand. Alongside other experts, Wavin is working to deliver safe and clean water security through enhanced rainwater reuse, the digitalisation of water management and more secure and durable piping.

### Better sanitation and hygiene

Outdated sewer systems are overwhelmed by a triple whammy of urbanisation, population growth and climate change. We're working towards a healthier future with long-lasting sanitation solutions that deliver greater capacity, fewer leaks, less clogging and better monitoring.

### Climate resilient cities

Smarter systems are needed to meet the five big challenges our cities face: floods, droughts, heat stress, ground water depletion and surface-water pollution. From roof to river, we are helping with connected water capture, attenuation, cleaning, reuse and transportation solutions to make cities climate resilient.

### Better building performance

Constrained by time, cost and product sourcing challenges, many of today's buildings fail to deliver on their expected performance. Through improved digital modelling, we can help our partners predict time and resource needs throughout the building process and provide intelligent solutions for better urban living.

# References

Wavin PP-RCT is a tested system that has been widely used all over Europe, Asia, Middle East, and other parts of the world for

decades. It is the number one choice for all professionals as well as owners.

# Product sustainability

At Wavin, we're committed to measuring the real-world impacts of our products and services throughout their life cycle. By assessing their carbon footprint and understanding what effect they have on the environment, we can seek more sustainable alternatives and continue to refine our blueprint for building a better future.

# About us

**Wavin is a leading global provider of innovative water management solutions for resilient construction.** As an Orbia business and a part of the business group 'Building & Infrastructure', **Wavin offers sustainability-based customer solutions for drinking water, sanitation, climate resilient cities and better building performance.** Redefining today's pipes and fittings industry with durable products and solutions that require less construction to install and innovating sustainable technologies for water collection and management, heating and cooling and a revolutionary road surface. Wavin headquarters are located in Zwolle, the Netherlands and it **serves 80+ countries on three continents with its 66 production sites located in 36 countries.** Wavin employs approximately 12 000 people

## Wavin is part of Orbia

Wavin is part of Orbia, a **community of companies bound together by a shared purpose: to advance life around the world.** Orbia is a purpose-led company, passionate about

the challenges that define how people will live and thrive tomorrow. Our decades-long history began as a leading producer of commodities, and through investment and strategic growth we've become a **global leader in polymers, materials, and infrastructure.** Today, we operate in 41 countries and employ more than 22,000 people worldwide.

## Solutions for Drinking Water

**Delivering clean water efficiently and safely has become a world-wide problem.** Water is lost due to leakages and ageing networks. We need to improve the distribution of clean drinking water from source to tap. We will work towards these goals by **raising the quality and performance of high-pressure water distribution networks, improving safety levels of indoor drinking water supply, and building towards a new (smarter) ways of managing drinking water.**

## Wavin Ekoplastik PP-RCT with new dezincification resistant (DZR) lead-free brass

### The future of combined fittings

### Why Lead-Free Brass? Why DZR?

#### Lead-Free

- ① EU registration calls for stricter legislation regarding to lead content
- ② Drinking Water Directive is now limiting the use of lead-free alloys for portable water
- ③ Wavin, an Orbia business, started the implementation of lead-free brass immediately, ahead of the legislation

#### Dezincification resistant (DZR)

- ④ We had to look for a different way of product protection BUT:
  - ⑤ Nickel/Zinc plating is already forbidden in many countries
  - ⑥ Passivated brass is not sufficient in regions using desalinated water in their water supply
- ⑦ DZR complies with ecological aspects as well as the requirements for the reliability and longevity of our products

# We are rocking ON BRASS!

## Designation of Pipes S (SDR) instead of PN

Designation of pipes S (SDR) instead of PN in accordance with the CSN EN ISO15874 and DIN 8077 standards, it is necessary to designate the pipes as "S" or "SDR" instead of "PN".

$$SDR = 2S+1$$

$$SDR \approx D/t$$

### Legend:

D = outside diameter  
t = the wall thickness

- ① The "PN" designation indicates the permissive operating pressure in bar for maximum temperature 20 °C and service life of 50 years.
- ② For the lowest design coefficient according to "PN", the standards ČSN EN ISO 15874 and DIN 8077 no longer specify the pipe classification.
- ③ We designate the PPR tubes as "PN" for historical reasons (it used to be the former designation for the pressurised product range) although the values no longer correspond to the definition above.
- ④ The PP-RCT is a new type of material and the "PN" designation has not been implemented.
- ⑤ The operating parameters of the pipes are specified in the designation on the tubes and in the Assembly instructions.

The catalogue states the "PN" values for the pipes made of PP-RCT for easier orientation (the "PN" formula as specified in the standard was used in the calculation).

# Utilisation of Wavin Ekoplastik PP-RCT Piping System

The Wavin Ekoplastik PP-R/PP-RCT piping system can be used for distribution systems in housing, administration and community buildings as well as for industrial and agricultural installations.

The system is designed for transport of cold and hot water as well as floor heating. In case of observance of the rules specified hereinafter the system is also suitable for central heating systems.

The Wavin Ekoplastik PP-R/PP-RCT piping system can also be used for air distribution. It is possible to take further advantage of its chemical resistance and other system properties and use the system for transport of other liquids or gaseous or solid media; such usage, however, must not be done without a prior individual assessment.

## Benefits

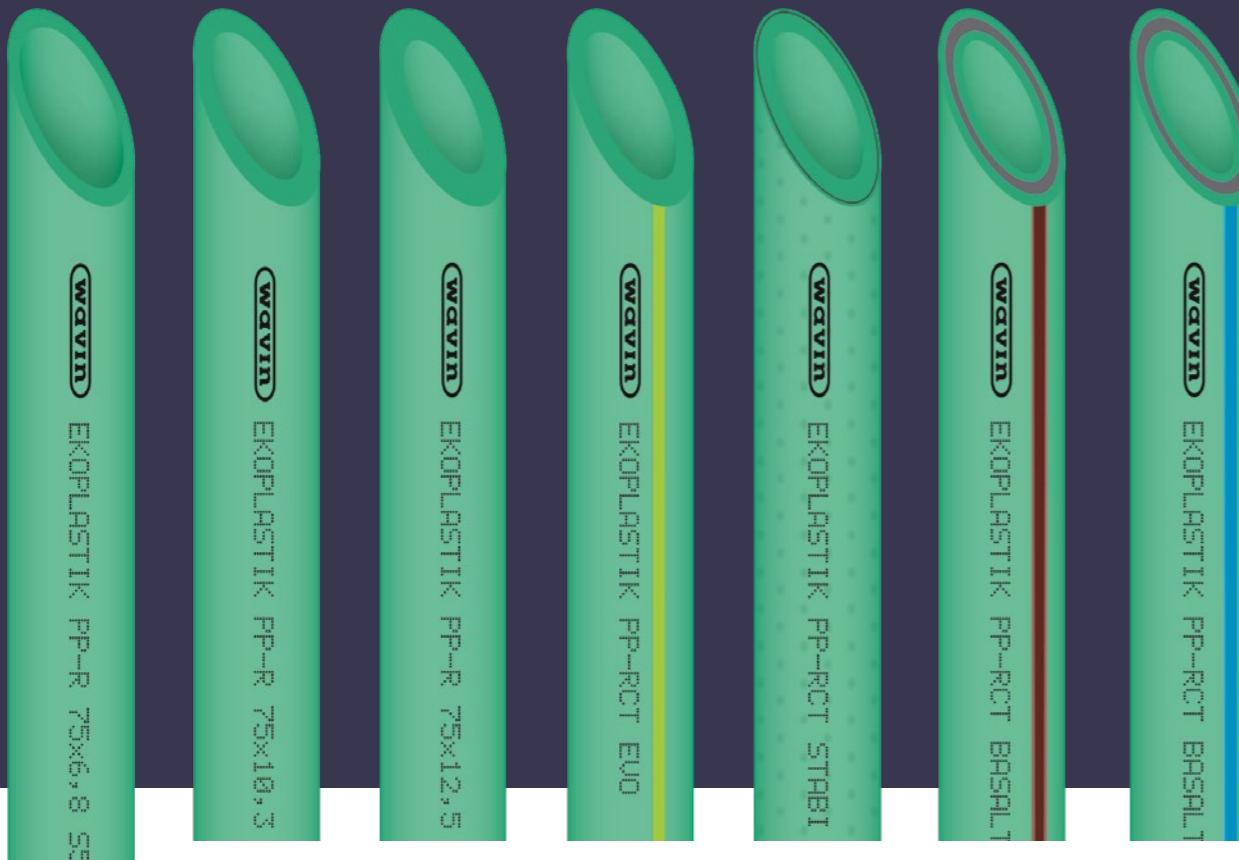

- ① complete set of pipes and fittings with sizes 16 - 125 mm
- ② universal for all pipes from the Wavin Ekoplastik PP-RCT system
- ③ manufactured from granulate by leading European manufacturers
- ④ unique three-layer tube with basalt fibers
- ⑤ 4th generation material – PP-RCT

# Wavin Ekoplastik PP-R/PP-RCT Piping System diameters 160 - 250 mm

The system consists of monolayer pipes, multilayer pipes and fittings with diameters between 160 - 250 mm and is manufactured from the PP-RCT material.

The system is intended for pressure distribution systems of potable (cold) water, hot water, compressed air, cooling water and air conditioning. The system is compatible with butt welding techniques.

- ⌚ Estimated delivery time for the listed product range is 30 days.
- ⌚ Standard products (I.) are covered by a 10-year warranty period.
- ⌚ Other products (IV.) are covered by a 2-year warranty period.

## Advantages of the system

- ⌚ Pipes and fittings made from PP-RCT (type 4), new generation polypropylene material)
- ⌚ Pipes and fittings of larger diameters than 125 mm are designed for butt welding
- ⌚ Same flow profile for both fittings and monolayer pipes - minimal pressure losses

**All 160 - 250 mm products (except for electrofusion couplings)  
will be replaced by the same products in grey colour during 2024.**

**160 - 250 mm pipes can be made to order also in SDR 7,4 and SDR 9.**
